(54) Title: ANTI-STICK DEVICE FOR BENT INJECTION NEEDLE

(54) Titre : DISPOSITIF ANTI-PIQUE POUR AIGUILLE D'INJECTION COUDEE

(57) Abstract: The invention concerns an anti-stick device for bent injection needle. The device consists of a wall formed by two articulated panels (1, 2, 3) including a base panel (1), a needle-holding panel (2), and a covering panel (3). The base panel (1) has two opposite lateral branches (1b, 1d) which are pre-curved to facilitate their application on the skin and two other lateral branches (1c, 1e) capable of being bent at will to be pressed on the skin. The two other panels have curvatures to match the curvature of the pre-curved branches when they are folded down on the base panel. The invention is useful for feeding an implanted chamber.

(57) Abrégé : L'invention concerne un dispositif anti-pique pour aiguille coudée. Le dispositif est constitué par une paroi formée de panneaux articulés (1, 2, 3) comprenant un panneau de base (1), un panneau porte-aiguille (2), et un panneau de recouvrement (3). Le panneau de base (1) présente deux branches latérales opposées (1b, 1d) qui sont pré-courbées pour faciliter leur application sur la peau et deux autres branches latérales opposées (1c, 1e) courbables à la demande pour leur appui sur la peau. Les deux autres panneaux présentent des courbures pour épouser la courbure des branches pré-courbées lorsqu'ils sont rabattus sur le panneau de base. Application à l'alimentation d'une chambre implantée.
